INFORMED CONSENT

STUDY DESCRIPTION

This study is a research project associated with the *Delft University of Technology*. The study is about human-robot interaction and memory. If you decide to participate, you will work with a social robot to complete simulated daily tasks. The robot will provide reminders, and we will observe how these reminders assist you in the activity.

PART 1: Participant Information

You are being invited to participate in a research study titled Context-Aware Robot Reminders. This study is being done by Haoran Tang, Mark Neerincx, Bernd Dudzik, and Yanzhe Li from the TU Delft.

PROCEDURE The experiment will take you approximately 45-60 minutes to complete. The data will be used for a Master thesis and further publications. You will be asked to interact with a social robot in a laboratory setting to complete simulated daily tasks. First, you will fill out some questionnaires, and then you will be tasked with performing a chess game, along with remembering to perform specific actions triggered by the robot's reminders. The robot will assist you throughout these activities. Once you have completed all tasks, you will be asked to fill out a final set of questionnaires.

USAGE, STORAGE AND SHARING OF COLLECTED DATA As with any research activity, the risk of a data breach is possible. We will minimize this risk by storing your data in professionally protected TU Delft storage. Your personal information (e.g., name, signed forms) will be treated confidentially, used exclusively for administrative purposes, and will NOT be shared publicly. The study involves recording computer screen and mouse movement patterns to analyze task performance. No video or audio of you personally will be recorded. Please be aware that fully de-identified research data (e.g., survey responses, anonymous task logs) will be made publicly available in an academic data repository, in accordance with TU Delft's Open Science principles. You can request your data be removed from the study at any time. If this is done within 1 month after the data collection, your data will not be included in analysis. After this time, your data can still be removed from the published dataset but we can no longer guarantee all older versions of the dataset are removed from circulation.

RIGHT TO REFUSE OR WITHDRAW You do not have to take part in this research if you do not wish to do so, and you can quit at any moment during the procedure without providing a reason. In this case, we will discard all data that has been collected from you up to that point.

PART 2: Explicit Consent points

PLEASE TICK THE APPROPRIATE BOXES	Yes
A: GENERAL AGREEMENT – RESEARCH GOALS, PARTICPANT TASKS AND VOLUNTARY PARTICIPATION	
1. I have read and understood the study information dated 27/01/2026, or it has been read to me. I have been able to ask questions about the study and my questions have been answered to my satisfaction.	☐
2. I consent voluntarily to be a participant in this study and understand that I can refuse to answer questions and I can withdraw from the study at any time, without having to give a reason.	☐
3. I understand that taking part in the study involves: • Answering 2 surveys • Interacting with a robot whilst performing a chess game • Digital recording of my screen activity and mouse movements during the task.	☐

PLEASE TICK THE APPROPRIATE BOXES	Yes
4. I understand that the study will end June 30th, 2026	☐
B: POTENTIAL RISKS OF PARTICIPATING (INCLUDING DATA PROTECTION)	
5. I understand that taking part in the study also involves collecting specific personally identifiable information (PII) [Name, Age, Email].	☐
6. I understand that the following steps will be taken to minimise the threat of a data breach, and protect my identity in the event of such a breach. The data will be pseudo-anonymized and stored on the Project Storage at TU Delft which has a high standard of security and only the research team can access.	☐
7. I understand that personal information collected about me that can identify me, such as name, will be pseudo-anonymized and only the primary researchers will have access to the pseudo-anonymized keys.	☐
C: RESEARCH PUBLICATION, DISSEMINATION AND APPLICATION	
8. I understand that after the research study the de-identified information (survey responses) I provide will be used for Master's thesis, further publications.	☐
9. I agree that my responses, views, mouse movement data or other input can be quoted anonymously in research outputs	☐
D: (LONGTERM) DATA STORAGE, ACCESS AND REUSE	
10. I understand that my personal research data will be destroyed after the end of the research project, as stated in the Information Sheet.	☐
11. I understand that the de-identified information (survey responses, mouse movement data) will be published in an academic data repository alongside the thesis. Access to this repository will be open to the public, in line with TU Delft's Open Science policies.	☐
